## VMware® NSX-T Reference Design

**Authors: VMware NSX Technical Product Management Team**

This is the NSX-T Reference Design Page.

This updated version of the document aligns with NSX version 3.2. It includes a multitude of updates. Highlights are:

- Updated platform overview and positioning in chapter 1
- OSPF, EVPN, Multicast, Edge HA updates in chapter 4
- Expansion and update of the design guidelines in chapter 7
- Expansion of the performance and optimization guidelines in chapter 8

Readers are encouraged to send feedback to NSXDesignFeedback\_at\_groups\_vmware\_com (replace at and underscores)

We will continue updating this document, so please re-download this document.

Great document. When is update expected for NSX-T 2.4 (or 2.5)?

05-08-2019 10:42 AM

**mauricioamorim** (<https://communities.vmware.com/t5/user/viewprofilepage/user-id/4224432>)

We don't have an ETA yet, but it is being worked on.

**daphnissov** (<https://communities.vmware.com/t5/user/viewprofilepage/user-id/2568444>)

The current revision of this paper was authored coming up on a year and a half ago. Until the next revision focusing on 2.4 is released, what are the biggest caveats of which to be aware in this document compared to the current version?

05-27-2019 05:28 AM

**mauricioamorim** (<https://communities.vmware.com/t5/user/viewprofilepage/user-id/4224432>)

Some documents have been posted with some of the biggest differences: new unified appliance (NSX-T Manager Cluster External LB by NSX-T (<https://communities.vmware.com/docs/DOC-39390>) ) and Multi-site Lite (NSX-T Multisite Lite (<https://communities.vmware.com/docs/DOC-39405>) ). I would say another big difference that will probably be on the updated design guide is regarding N-VDS and transport zones design and mapping to physical NICs.

We are all eager and hoping the updated design guide is published soon.

**jcaamanosuse** (<https://communities.vmware.com/t5/user/viewprofilepage/user-id/3729071>)**mauricioamorim NimishDesai**

Chapter 6.3.3, figure 6.8 vaguely suggests how other non NSX-T networks (like storage) can be run through the KVM N-VDS. Will the updated document include more details on this or can you provide details on what would be the vmware recommended or future-proof way to do it, as there are different options and all of them exposed to interfere with NSX-T own management of the N-VDS.

Thanks.

With all the changes in 2.4 I cannot believe that there is "still" no updated reference guide available. Makes life in the real world really hard. And some customers want to see such stuff too, otherwise they will not accept a given design.

At least the VVD has some tidbits in the Workload Domain section about T, though they do not cover it all or go into too much detail.

Is there any chance that there will be Reference Guide for 2.4 finally, or maybe only for 2.5?

Hard to convince customers to adopt T with that much delay, esp. in these times.

I concur, the design guide should be a living document that keeps up with the release cycle where appropriate. It should be moved to docs.vmware.com and have a regular update same as the VVD.

The instructions in Appendix 3 have some errors.

Step 2.b should be modified to take the document output from step 2.a and modify the failure\_domain\_id and use that as the data for the PUT. You can use this jq query

```
fd_id="$fd_id" jq '.failure_domain_id = env.fd_id' transport-node-respon
```

Step 3.a has "allocation\_rules": [FD1], but it should be

```
allocation_rules=[ { "action" : { "enabled" : true, "action_type" : "All
```

If you're looking for a jq query to make the change you can use:

```
jq '.allocation_rules = [ { "action" : { "enabled" : true, "action_type"
```

04-27-2020 02:43 AM

steffen\_richter (<https://communities.vmware.com/t5/user/viewprofilepage/user-id/413603>)

If you take a look at the Lifecycle Matrix you can see that NSX-v has its end of general support in January 2022, and there will be no further NSX-v releases. NSX-T is somehow its successor - same same but different. Not sure if I'd call it a replacement, but T is the way forward.

When is the Design Guide updated to 3.0 finally?

The GA of the product has been more than 4 months ago now. If VMware wants the customers to adapt the product, a current Reference Design Guide is mandatory. We are still deploying mostly 2.5 because the customers don't feel confident without an official design guidance confirming several critical design decisions - apart from missing guidance on newer features like VRF or Federation.

VMware, it's about time to get a tad bit more agile in this topic, please!

👍 ([https://communities.vmware.com/t5/tkb/v2\\_4/articlepage.kudosbuttonv2.kudoentity:kudoentity/kudosable-gid/2778121?t:ac=blog-id/4002/ar](https://communities.vmware.com/t5/tkb/v2_4/articlepage.kudosbuttonv2.kudoentity:kudoentity/kudosable-gid/2778121?t:ac=blog-id/4002/ar))

It would be lovely if we could at least get a comment from someone at VMware about when or if we can expect an updated guide. I feel that the changes in 3.0 are enough to warrant an updated reference design for sure.
